Global Authentication and Credential Security Policy

Policy Name: Global Authentication and Credential Security Policy
Category: Authentication / Password
Version: 2.1
Owner: Chief Information Security Officer (CISO)
Effective Date: 2026-02-15
Review Date: 2027-02-14

1. Objective

This policy dictates identity verification, credential standards, and single sign-on (SSO) protocols for all authorized actors accessing organizational services.

2. Core Requirements

- Privileged accounts must use multi-factor authentication for interactive and programmatic console sessions.
- Passwords must adhere to modern NIST SP 800-63B guidelines, prohibiting easily guessable phrases.
- Single Sign-On (SSO) integration is required for all enterprise software-as-a-service applications.

3. Verification & Governance

Authentication telemetry shall be monitored continuously by security engineering.
